a controller being switchable to a learning mode for learning a unique code of a remote transmitter to define a learned remote transmitter, said controller also being switchable to a door moving mode for moving the access door based upon receiving a signal from the learned remote transmitter; and

at least one remote switch for causing said controller to cooperate with said at least one indicator for indicating whether a new uniquely coded remote transmitter has been learned;

wherein indication of whether a new uniquely coded remote transmitter has been learned comprises indicating a number of learned remote transmitters.

Referring to claim 14, Claim 14 is "Canceled".

Referring to claim 24, replace the claim 24 as follow:

A remote control system for moving an access door and comprising:

at least one indicator;

at least one uniquely coded remote transmitter; and

a controller being switchable to a learning mode for learning a unique code of a remote transmitter to define a learned remote transmitter, said controller also being switchable to a door moving mode for moving the access door based upon receiving a signal from the learned remote transmitter;

said controller cooperating with said at least one indicator for continuously indicating whether a new uniquely coded remote transmitter has been learned;
